Q.1

Let $ABCD$ be a trapezium in which $AB \parallel CD$ and $AB = 3CD$. Let E be the midpoint of the diagonal BD . If area $ABCD = n \times$ area CDE , what is the value of n ?

A 6

B 7

C 8 ✓

D 9

Q.2

Let ABC be a triangle with $AB = AC$. Let D be a point on the segment BC such that $BD = \frac{48}{61}$ and $DC = \frac{1}{61}$. Let E be a point on AD such that CE is perpendicular to AD and $DE = 11$. Find AE .

A 20

B 23

C 25 ✓

D 28

Q.3

k	$k+1$	$k+2$	$3k$	$k+3$
10^4	10^3	10^2	10^1	10^0

A 5-digit number (in base 10) has digits $k, k+1, k+2, 3k, k+3$ in that order, from left to right. If this number is m^2 for some natural number m , find the sum of the digits of m .

A 12

B 14

C 15 ✓

D 18

Q.4

Let ABC be a triangle with $AB = 5, AC = 4, BC = 6$. The internal angle bisector of C intersects the side AB at D . Points M and N are taken on sides BC and AC , respectively, such that $DM \parallel AC$ and $DN \parallel BC$. If $(MN)^2 = \frac{p}{q}$ where p and q are relatively prime positive integers then what is the sum of the digits of $|p - q|$?

A 1

B 2 ✓

C 3

D 4

Q.5

A group of women working together at the same rate can build a wall in 45 hours. When the work started, all the women did not start working together. They joined the work over a period of time, one by one, at equal intervals. Once at work, each one stayed till the work was complete. If the first woman worked 5 times as many hours as the last woman, for how many hours did the first woman work?

A 60 Hours

B 65 Hours

C 70 Hours

D 75 Hours ✓
